

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1 - 7 (Canceled).

Claim 8 (Currently amended). A simmer plate dispenser for active materials, said dispenser comprising, in combination, a meltable solid fuel comprising a volatile active material, a consumable wick, a heat conductive base upon which said fuel rests[, and] having heat conductive elements in said base by which heat is conducted to said base from a flame upon said wick, whereby a pool of heated liquid fuel is created from which said active material volatilizes, wherein said heat conductive base is configured so as to cause the flow of said heated liquid fuel to said wick for combustion, said base and said heat conductive elements are configured so as to cooperatively engage said solid fuel, and said active material is selected from the group consisting of fragrances, air fresheners, deodorizers, odor eliminators, odor counteractants, insecticides, insect repellants, herbal substances, medicinal substances, disinfectants, sanitizers, mood enhancers, aroma therapy compositions, and mixtures thereof.

Claim 9 (Original). The dispenser of Claim 8, wherein said fuel is selected from the group consisting of gels and solid waxes.

10 (Currently amended). The dispenser of Claim 8, wherein said heat conductive element [is selected from the group consisting of lobes, fins, wick holders, and combinations thereof] comprises a lobe.

Claim 11 (Currently amended). The dispenser of Claim 10, wherein said [heat conductive element is a lobe, and said] volatile active is selected from the group

consisting of fragrances, air fresheners, insect repellants, herbal substances, mood enhancers, and aroma therapy compositions.

Claim 12 (Canceled).

13 (Original). A simmer plate dispenser for dispersing an active ingredient selected from the group consisting of fragrances, air fresheners, deodorizers, odor eliminators, odor counteractants, insecticides, insect repellants, herbal substances, medicinal substances, disinfectants, sanitizers, mood enhancers, aroma therapy compositions, and mixtures thereof, said dispenser comprising a replaceable fuel containing said ingredient and a wick, and a dispensing device comprising a heat conductive simmer plate, and a heat conductive element to collect heat from a flame at said wick and conduct said heat to said simmer plate to thereby melt said fuel containing said active ingredient and form a pool of liquid fuel on the surface of said simmer plate, wherein said dispensing device is configured to position and engage said fuel on said simmer plate for rapid melting, said simmer plate is shaped so as to cause said pool of liquid fuel to flow to said wick, said active ingredient is selected so as to evaporate from said pool of liquid fuel, and the temperature of said pool of liquid fuel exceeds a temperature of about 180° F. at a point about 10 mm from said wick, and about 160° F at a point about 20 mm from said wick.

14 (Original). A simmer plate dispenser as set forth in Claim 13, wherein said heat conductive element is selected from the group consisting of lobes, fins, wick holders, and combinations thereof.

15 (Original). The dispenser of Claim 14, wherein said heat conductive element is a lobe, and said active ingredient is selected from the group consisting of fragrances, air fresheners, insect repellants, herbal substances, mood enhancers, and aroma therapy compositions.

16 (Original). The dispenser of Claim 14, wherein said heat conductive element is a wick holder with fins, and said active ingredient is selected from the group consisting of

fragrances, air fresheners, insect repellants, herbal substances, mood enhancers, and aroma therapy compositions.

Claims 17 - 20 (Canceled).

Claim 21 (Currently Amended). A dispensing device for dispersing a volatile active material, said device comprising a heat conductive container for a replaceable fuel element comprising a combustible wick and said volatile active material, said container comprising a heat conductive lobe whereby heat is conducted to said fuel element and said container, said container and lobe configured so as to engage and melt said solid fuel element and to cause the flow of melted fuel to said wick.

22 (Original). A dispensing device as set forth in Claim 21, wherein said container comprises a concave simmer plate constructed of a heat conductive material selected from the group consisting of brass, aluminum, steel, copper, stainless steel, silver, tin, bronze, zinc, iron, clad materials, heat conductive polymers, ceramics, glass, and combinations thereof.

23 (Canceled).
